Discovery of an indigenous strain of AIDS

4176. SHRI MURLIDHAR CHANDRAKANT BHANDARE: Will the Minister of HEALTH AND FAMILY WELFARE be pleased to state:

(a) whether it is a fact that India's first death of an AIDS' positive patient who acquired the virus indigenously occurred in vellore, Tamil Nadu on May 14, 1988;

(b) if so, whether it suggests discovery of an indigenous strain of AIDS virus; and

(c) what is Government's latest assessment of the magnitude of the AIDS problem in India, in the light of the said discovery?

THE MINISTER OF STATE IN THE MINISTRY OF HEALTH AND FAMILY WELFARE (KUMARI SAROJ KHAPARDE): (a) Yes.

(b) This is the first case of AIDS acquired indigenously from another Indian who had infection with the virus. There is, however, no evidence that the virus is in anyway different from the ones infecting the other AIDS cases reported from India in patients who acquired the infection abroad. In addition to the case from Tamil Nadu, there have been 3 other cases of AIDS in whom the infection was acquired indigenously.

(c) so far, there had been 23 cases of AIDS detected in India. Of these, 7 were foreigners and 16 were Indians. Among the 16 Indians, only 4 appear to have acquired the infection in India. Thus the magnitude of clinically ill AIDS cases in India appears to be quite low.
